

How would you suggest we address these barriers / challenges to improve the changes of success?

Responses

- NA Work this training in to prompt and stat man. Unsure?
- Continue to recruit to the support team as others leave.
- Have large enough teams for support team. make this training mandatory for all.
- Good strong leadership within the trust. Advertisement throughout the trust. Generate interest and excitement. Posters for women and staff within public areas and staff meetings/rooms.
- More obstetricians on this study day N/A
- Ensure the training is as widespread as possible Train more
- Talk to the managers and send emails around encouraging people to get involved.
- Raise the profile of the study. Education of midwifery and ovstetric teams on the study.
- Clear instruction to women and staff re the benefits of the study
- Ensure health care professionals are well trained in breech birth Unclear
- Invite women who have had a positive breech birth experience to antenatal classes?
- Training for all staff on delivery areas, consultants to reassure staff working under them that they are happy to be called in for breech births
- We have to push forward with as much research like this and aim to put physiological breech birth on the general agenda of maternity care and antenatal education.
- Clear vision from consultant mw, head of midwifery? Support of a consultant obstetrician and educstiong others on this trial/team
- Ensure consultants are really interested in coming in for breech deliveries, and support for women is in place at all times
- Don't do a randomised trial, and offer women all options
- Make this study day mandatory to all staff in the trust and annual updates and reminders. Involve these manouvers in skills and drills to consolidate learning. Breech team to work closely with intrapartum staff to support developing others skills.
- Breech study days for all staff
- Local meetings with senior staff to explain design trial, how the local team will be supported
- Cooperation by the women
- Protected 24/7 team - who are not called out at other times. Bigger sample size.
- giving evidence based information, risk and benefits
- Training all staff will give every mw the option to be confident to assisst breech vaginal birth
- Offer detailed info at source, when diagnosed breech
- Support us in delivering cascade training. Fund the team set up.
- Education of the team BUT also education of the doctors and midwives who may initially see the women
- Data
- Training more doctors and mw about counseling especially for undiagnosed breech
- More training for staff to empower staff and patients
- Make breech more of a variation of normal and not something to be scared of
- More study days- I am aware some colleagues could not attend today and wish they could have
- Increase breech birth training to increase confidence Everyone to attend this course
- More study days available for staff Training! Evidence, studies...
- Teaching on site, well supported on the ward, study days, mandatory
- More training such as this Raise awareness of the practitioners
- Specific teaching for doctors and one on one training with midwives
